EDUCATION

University of Pennsylvania

Bachelor of Engineering in Computer Science and Mathematics

Expected May 2029

Philadelphia, PA

EXPERIENCE

Zenblen

June 2026 - Present

AI/Software Engineer Intern

Chicago, IL

- Built YOLO/OpenCV computer vision pipelines processing real-time kiosk camera streams for food quality and sanitation monitoring.
- Designed QA evaluation framework with labeled images, confidence thresholds, and anomaly reports to validate model performance before field deployment.
- Developed fleet monitoring and auto-recovery services detecting camera, model, and service failures across distributed autonomous kiosks.

University of Pennsylvania Campbell Lab

Aug. 2025 – May 2026

Research Intern

Philadelphia, PA

- Built computer vision pipelines converting raw zebrafish assay videos into quantitative behavioral phenotypes for neurogenetic research.
- Automated multi-feature extraction (position, orientation, swim patterns) using Python, YOLO, and OpenCV for large-scale behavioral analysis.

Penn Aerial Robotics

Aug. 2025 – Present

Software Developer

Philadelphia, PA

- Built autonomy and perception software for UAVs competing in IARC and SAE Aero Design; team placed 1st globally in SAE Design Report among 600+ teams.
- Engineered ROS2/PX4 pipelines in a Linux-based development environment for autonomous navigation, obstacle avoidance, simulation validation, and real-time flight decision-making.
- Developed OpenCV/PyTorch modules for object tracking and perception, integrating outputs into UAV autonomy and control systems.

MindX Sciences

Jun. 2024 – Jan. 2025

App Development Intern

Remote

- Led React Native development of a mental health app serving 2,000+ users, including mood tracking, journaling, and analytics dashboards.
- Integrated Firebase Analytics and TestFlight feedback pipelines to measure engagement, diagnose issues, and drive data-informed product iteration.

PROJECTS

First Author ICML Legal AI Publication

Mar. 2026 – May 2026

- Published an ICML AI4Law Workshop paper (18% acceptance rate) [Paper] evaluating frontier LLMs across 4,368+ legal prompts and surfacing performance gaps across legal domains.
- Designed 1,456 LegalBench prompt triplets analyzing how expert, lay, and emotionally distressed phrasing affects legal AI accuracy.
- Analyzed prediction flips to identify LLM weaknesses tied to legal jargon, phrasing, and emotional tone.

Google Ventures / Partiful AI Consulting

Jan. 2026 – Feb. 2026

- Developed LLM-powered product concepts for social event onboarding, discovery, and group coordination after discussions with Partiful and Google Ventures leaders.
- Mapped user friction points into AI feature proposals targeting activation, retention, and event-planning engagement.

Smart Sketch

Jan. 2026 – May 2026

- Built full-stack AI lecture assistant converting live audio into replayable concept maps using Next.js, LiveKit, Deepgram, Gemini, and Supabase.
- Designed Supabase schema and session replay system for transcripts, graph nodes, audio uploads, and Gemini-powered chat history.

IEEE NLP Research Publication

May 2022 – Aug. 2022

- Co-authored IEEE NLP research [Paper] analyzing 2.6M+ comments across Reddit, YouTube, Twitter, and Amazon.
- Benchmarked transformer models and selected SiBERT after achieving 99.37% sentiment accuracy.
- Applied clustering and KL-divergence to quantify semantic and sentiment drift across platforms.

TECHNICAL SKILLS

Languages: Python, C#, JavaScript/TypeScript, Java, SQL

Technologies & Frameworks: PyTorch, TensorFlow, ROS2, PX4, OpenCV, YOLO, scikit-learn, NumPy, pandas, React, React Native, Next.js, Node.js, AWS, Supabase, Firebase, Git, Claude Code
