EDUCATION

University of Pennsylvania

Bachelor of Engineering in Computer Science and Mathematics

Expected May 2029

Philadelphia, PA

EXPERIENCE

Zenblen

June 2026 – Present

AI/Software Engineer Intern

Chicago, IL

- Built Python, YOLO, and OpenCV pipelines that process real-time kiosk camera streams to detect food-quality, sanitation, and operational anomalies in autonomous smoothie kiosks.
- Designed model QA infrastructure with labeled datasets, confidence thresholds, failure categorization, and automated anomaly reports to validate computer vision performance before deployment.
- Developed AWS fleet-monitoring and auto-recovery services that detect camera, inference, and application failures across distributed kiosks and deliver automated incident alerts through Slack integrations.

University of Pennsylvania Campbell Lab

Aug. 2025 – May 2026

Research Intern

Philadelphia, PA

- Built Python, YOLO, and OpenCV pipelines that convert raw zebrafish assay videos into quantitative behavioral phenotypes for large-scale neurogenetic research.
- Automated extraction of position, orientation, velocity, trajectories, and swim patterns, transforming unstructured video into analysis-ready experimental datasets.

Penn Aerial Robotics

Aug. 2025 – Present

Software Developer

Philadelphia, PA

- Built Linux-based UAV autonomy and perception software for IARC and SAE Aero Design; team ranked 1st globally in Design Report among 600+ teams.
- Engineered ROS2 and PX4 pipelines for autonomous navigation, obstacle avoidance, simulation validation, flight-state management, and real-time control decisions.
- Integrated PyTorch and OpenCV detection, tracking, and localization modules with UAV autonomy and control systems.

Google Ventures

Jan. 2026 – Feb. 2026

Software Engineer

Remote

- Developed LLM-powered product prototypes for Partiful event onboarding, discovery, and group coordination in collaboration with Google Ventures and Partiful stakeholders.
- Translated user friction into technical AI workflows targeting product activation, retention, and event engagement.

PROJECTS

First Author ICML Legal AI Publication | [Paper](#)

Mar. 2026 – May 2026

- Published first-author research at the ICML AI4Law Workshop with an 18% acceptance rate, evaluating frontier LLMs across 4,368 legal prompts and identifying performance disparities across legal domains.
- Built a Python analysis pipeline for 1,456 controlled LegalBench prompt triplets and answer-level prediction flips, isolating model sensitivity to legal terminology, user expertise, framing, and emotional tone.

Sports Arbitrage Platform | [GitHub](#)

June 2026 – Present

- Architected a replayable pipeline with 31 sportsbook adapters, httpx polling, pure JSON parsers, Pydantic validation, canonical event normalization, raw-response provenance, and SQLite auditing.
- Built commission- and settlement-aware arbitrage and promotion engines that detect cross-book mispricing, enforce counterparty and stale-quote constraints, optimize hedging stakes, and generate executable plans

Poker Trainer | [GitHub](#)

June 2026 – Present

- Architected a local-first Python and Streamlit platform using SQLite WAL, FFmpeg, detached workers, and a two-model YOLO/card-classification pipeline to reconstruct completed recordings into auditable hand data.
- Integrated eval7 equity simulation, ledger-based accounting, CFR analysis, and evidence-grounded LLM coaching, with Docker deployment to detect and improve upon EV leaks.

IEEE NLP Research Publication | [Paper](#)

May 2022 – Aug. 2022

- Co-authored IEEE NLP research analyzing more than 2.6 million comments across Reddit, YouTube, Twitter, and Amazon to study cross-platform sentiment and semantic variation.
- Benchmarked transformer-based sentiment models in Python, selected SiEBERT after achieving 99.37% classification accuracy, and applied clustering and KL divergence to quantify semantic and sentiment drift.

TECHNICAL SKILLS

Languages: Python, C#, Java, JavaScript, SQL | **Tools:** AI/ML Frameworks(PyTorch, etc), ROS2, AWS, Docker, Git
